

Call for Metalworking Fluid Technical Papers

2022 STLE Annual Meeting

The Metalworking Fluids Technical Committee invites all STLE members and non-members to submit abstracts for technical papers focusing on metalworking fluids (MWFs), including metal removal and metal forming fluids. Priority consideration will be given to papers in the following categories:

- MWF Management and Testing
- MWF Case Studies
- MWF Sustainability (regulatory, safety/health, environmental impact, etc.)
- MWF Challenges and Opportunities in the Age of 3D Printing and Electric Vehicles

Commercialism is strictly prohibited, and abstracts with a commercial focus will be rejected and redirected for consideration in the Commercial Marketing Forum sessions.

Abstracts should be submitted on the STLE website at <https://stle2022.abstractcentral.com/>, by October 1, 2021. Abstracts submitted after this date will be considered if slots are available in the MWF technical sessions.

Thank you for considering the submission of a technical paper. The success of our sessions depends on the commitment, hard work and quality of papers submitted by authors like you!

Best Wishes,

Jill Myers, Paper Solicitation Chair
Patrick Brutto, PSC Vice Chair
