

Discussion Round Tables at STLE annual meeting 2018

Session Chair and technical Organization

Dr. Hannes Grillenberger

Schaeffler Technologies AG & Co. KG

hannes.grillenberger@schaeffler.com

Society of Tribologists and Lubrication Engineers

Agenda

1 Introduction

- 1.1 Format of Discussion Round Tables
- 1.2 Hosts and their topics, Schedule

2 Notes on the Tables

3 Impressions of the DRTs

Agenda

1 Introduction

Discussion Round Tables

Discussion Rules

- ▶ Discuss politely and respect the moderator and other attendees
- ▶ **write as many notes you can**
- ▶ get your point of view on the topic

Number of attendees

- ▶ Maximum 10 people per table
- ▶ first come first serve

Topics and Hosts

- ▶ Hosts volunteer with their own topic
- ▶ their maximum technical benefit → find blind spots and get new impulses

Time line

- ▶ Introduction (5 mins)
- ▶ Discussion 1 (20 mins)
- ▶ **obligatory** table switch (5 mins)
- ▶ Discussion 2 (20mins)
- ▶ ...

Wrap up

Session Chair will take photos

- ▶ during the session
 - ▷ get the impressions of the format
- ▶ after the session
 - ▷ keep records on the table

Session Chair will wrap up a small presentation and upload on STLE web site

→ **leave your business card to get a notice**

Agenda

1 Introduction

1.1 Format of Discussion Round Tables

1.2 Hosts and their topics, Schedule

2 Notes on the Tables

3 Impressions of the DRTs

William Tuszynski

What areas of performance improvements are of importance to end users of greases and lubricants?

Gagan Srivastava

Real-time oil quality analysis

Manfred Jungk

Do Nanoparticles disappear in the valleys of surface roughness or do the valleys provide a reservoir?

Bodo Hahn

A perfect rolling bearing simulation. What effects should be included?

Lynn Rice

What requirements/performance SPECS will be required for next-generation additives that can't be met by current additive technology?

Arup Gangopadhyay

Improving heat transfer characteristics of lubricants

Chris DellaCorte

Are rolling contact fatigue life models GOOD ENOUGH?

3.40 pm						Lynn Rice		
4.10 pm								
4.40 pm						Lynn Rice		

Agenda

1 Introduction

2 Notes on the Tables

- 2.1 Wiliam Tuszynski - What areas of performance improvements are of importance to end users of greases and lubricants?
- 2.2 Gagan Srivastava - Real-time oil quality analysis
- 2.3 Manfred Jungk - Do Nanoparticles disappear in the valleys of surface roughness or do the valleys provide a reservoir?
- 2.4 Arup Gangopadhyay - Improving heat transfer characteristics of lubricants
- 2.5 Bodo Hahn - A perfect rolling bearing simulation. What effects should be included?
- 2.6 Chis DellaCorte - Are rolling contact fatigue life models GOOD ENOUGH?
- 2.7 Lynn Rice - What requirements/ SPECS will be required for next-generation additives that can't be met by current additive technology?
